bgcol

bgcol txtcol DAVID CONNER

I'm an engineer with experience in networking, databases, containers, and web applications. I'm looking to transition into a role that leverages software to solve domain-specific problems, whether as an application programmer or devops. I have experience integrating disparate systems with minimal service interruptions and no loss of data.

I'm fast learner with a thirst for staying ahead in the technology world. When practical, I prefer the source code as documentation for most tools.
